EDUCATION

LJ University

Bachelor of Engineering in Computer Science and Technology

June 2022 – June 2026

Gujarat, India

- **Relevant Coursework:** Data Structures & Algorithms (DSA), Database Management Systems (DBMS), Computer Networks (CN), Programming in Python, Programming in Java, MERN Stack Development, AWS Cloud Computing.

EXPERIENCE

AI Platform Developer

RdFlex

July 2025 – Present

Gandhinagar, India

- Contributing to an AI-powered development platform that uses Anthropic Claude to generate application modules from natural-language prompts.
- Built the Python authentication, session, and REST API layer that the AI orchestrator consumes — JWT/OAuth flows, cross-subdomain cookies, CORS handling, and instance lifecycle endpoints.
- Integrated the Python AI engine, editor-sync sidecar, and validation services with the core platform; designed the draft-instance provisioning flow that lets the AI generate and preview code in seconds.
- Deployed services to Kubernetes — Kind for local dev and DigitalOcean DOKS for production — with automated Docker image build/push pipelines and Gateway API routing.

Python Developer Intern

RdFlex

Jan 2025 – June 2025

Gandhinagar, India

- Developed Python backend components for a business management platform serving manufacturing and retail clients; optimized PostgreSQL schemas and queries for production performance.
- Integrated third-party REST APIs for e-commerce and inventory-management use cases; participated in the full SDLC from specs and debugging to resolving production issues.

PROJECTS

Vrixo | *Python, PyTorch, HuggingFace, FastAPI, Next.js*

- Building an AI photo-enhancement platform offering background removal, HD upscaling, face enhancement, colorization, object removal, and old-photo restoration.
- Integrated open-source vision models: Real-ESRGAN (4× upscale), GFPGAN (face enhancement), RemBG (background removal), and LaMa (object removal).
- FastAPI + Celery/Redis queue for GPU-bound inference; Next.js 14 + shadcn/ui frontend; Supabase authentication and Cloudflare R2 object storage.

Stock Price Prediction | *Python, Django, Scikit-learn, Plotly*

- Stock-forecasting web app applying multiple Scikit-learn regression models to historical equity data from the Yahoo Finance API, with interactive Plotly visualizations of predictions vs actual prices.

LendLocal | *Next.js 14, Prisma, Postgres, Stripe*

[Live Demo](#)

- Built a full-stack hyperlocal sharing platform with OAuth authentication, listings, bookings, Stripe payments, and Leaflet-based map discovery. Designed the Prisma/Postgres schema end-to-end and deployed to Vercel.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C/C++, SQL (PostgreSQL), HTML/CSS

Frameworks: FastAPI, Django, Next.js 14, React, Node.js, Express.js, Tailwind CSS, shadcn/ui, Material-UI

ML & Data: Scikit-learn, NumPy, Pandas, Plotly, Matplotlib; integrating pre-trained vision models (Real-ESRGAN, GFPGAN, RemBG) via PyTorch / HuggingFace

Infrastructure: Docker, Kubernetes (Kind, DigitalOcean DOKS), Celery, Redis, AWS, Vercel, Supabase

Databases & Tools: PostgreSQL, MongoDB, Prisma; Git, GitHub, VS Code, PyCharm, IntelliJ
