EDUCATION

LJ University

June 2022 – June 2026

Bachelor of Engineering in Computer Science and Technology

Gujarat, India

- **Relevant Coursework:** Data Structures & Algorithms (DSA), Database Management Systems (DBMS), Computer Networks (CN), Programming in Python, Programming in Java, MERN Stack Development, AWS Cloud Computing.

EXPERIENCE

Backend Developer

July 2025 – Present

RdFlex

Gandhinagar, India

- Developing Python backend services for a multi-service web platform — designing REST APIs, authentication flows, and database layers in Python (FastAPI / Odoo) against PostgreSQL.
- Built JWT and OAuth authentication with refresh tokens and cross-subdomain cookie handling; implemented CORS middleware shared across multiple services and origins.
- Designed and optimized PostgreSQL schemas and queries for the platform's instance-lifecycle data model; integrated external services through REST APIs.
- Containerized services with Docker and deployed to Kubernetes (Kind for local dev, DigitalOcean DOKS for production); automated image build/push pipelines and Gateway API routing.

Python Developer Intern

Jan 2025 – June 2025

RdFlex

Gandhinagar, India

- Developed Python backend components for a large-scale business management platform serving manufacturing and retail clients; delivered custom features in Python with PostgreSQL.
- Engineered and optimized PostgreSQL schemas and queries for high data integrity and production performance; integrated third-party REST APIs for e-commerce and inventory management.
- Participated in the full SDLC — requirements gathering, technical specifications, debugging, and resolving issues in production systems.

PROJECTS

Vrixo | *Python, FastAPI, SQLAlchemy, PostgreSQL, Celery, Redis*

- Building a Python-based backend for an AI photo-processing platform: FastAPI REST API, SQLAlchemy + PostgreSQL for user and job data, and a Celery + Redis queue for asynchronous, GPU-bound image-processing jobs.
- Designed REST endpoints for upload, job submission, and result retrieval; integrated Supabase authentication and Cloudflare R2 for image storage; wrote pytest unit and integration tests for auth and image pipelines.

LendLocal | *Next.js API routes, Prisma, PostgreSQL (Neon), Stripe*

[Live Demo](#)

- Built the full backend for a hyperlocal sharing platform: OAuth authentication, server-side API routes, and Stripe payment integration.
- Designed the Prisma / PostgreSQL schema covering users, listings, bookings, reviews, and moderation reports; wrote automated test flows (1100+ lines) for booking and payment journeys.

Near | *Firebase (Firestore, Cloud Functions, FCM), WebRTC, TypeScript, Cloudinary*

- Designed the realtime data layer for a couples app on Cloud Firestore — couple, message, and album models with security rules enforcing per-couple access; built the WebRTC signaling backend over Firestore (offer/answer/ICE) for voice, video, and sleep calls.
- Built a Cloud Functions + FCM service pushing notifications on new messages and nudges, end-to-end-encrypted secret chat with passphrase-derived keys (KDF + iteration hardening), and Cloudinary-backed asynchronous video-message upload and playback.

TECHNICAL SKILLS

Languages: Python, SQL (PostgreSQL), JavaScript, TypeScript, Java, C/C++

Backend Frameworks: FastAPI, Django, Node.js, Express.js; REST API design, JWT / OAuth authentication, CORS, WebRTC signaling

Databases & ORMs: PostgreSQL, MongoDB, Prisma, SQLAlchemy, Supabase, Neon, Firebase / Firestore

Async & Data: Celery, Redis, Firebase Cloud Functions / FCM, Scikit-learn, NumPy, Pandas, Plotly, Matplotlib

Infrastructure & Tools: Docker, Kubernetes (Kind, DOKS), Git, GitHub, AWS, Vercel, VS Code, PyCharm, IntelliJ
